## **UV Germicidal Lamp Manufacturers: Take Advantage of our Resources**

OEMs of any size benefit from our extensive in-house resources of modern, state-of-the-art manufacturing plants as well as a large research and development division.

Many clients opt for a nonstandard lamp designed to fulfill needs that are critical to a specific germicidal application rather than build their equipment around a lamp from our standard, off-the-shelf models.

In this situation, our team works with an OEM from prototype right through to the finished product. As the foremost UV germicidal lamp manufacturers, our specialty lamps can be completely customized from the length and diameter, power, fitting sockets, and ceramic bases. Our proprietary ceramic bases are preferred for germicidal and ozone producing lamps due to their resistance to UVC radiation, ozone, heat and moisture and have a high-quality appearance. If required, other base materials are available.

Regardless of whether you choose from our standard UV lamps or go with a custom design, we can provide lamps for virtually all applications. If you do choose a base/socket design and patenting process, we are very experienced with unique base designs as well as dealing with the Patent & Trademark Offices. Your individual proprietary project can be nailed down within a couple of months.

**LightSources and our affiliated companies represent the leading high-tech designers and manufacturers in the lamp industry. Our products are used globally in a multitude of applications and industries such as our UV germicidal lamps that offer patent-protected, OEM-oriented solutions. Please contact us for more information on the benefits of working with the leading UV germicidal lamp manufacturers.**
