

Swirl

Swirl Technology

The Swirl lamp is an ultrahigh-power tanning technology with periodical swirls or depressions on the outer tube. This custom-glass provides a greater surface which reduces radiant heating while improving the efficiency of lamp cooling. Swirl lamps are also designed to allow higher input and increased UV radiation output.

Cosmetics are a focal part of the indoor tanning industry. Our swirl lamp creates a unique look in your tanning unit. Its aesthetics are appealing to the end user.

This uniquely shaped lamp is available in all standard lengths and wattages between 100W up to 225W. Order it with or without a 180 degree reflector, a dual or tri- coat.

The extraordinary look of our revolutionary Swirl technology makes it a popular choice for private branding. Create a luxurious look of art with a longer lamp life and an increased UV output!
