

## Proposition 65 Declaration

---

Dear Valued Customers:

Light Sources and LCD Lighting are committed to providing you high quality engineered lamp solutions that meet regulatory, statutory and state compliances. Proposition 65, the California Safe Drinking Water and Toxic Enforcement Act, provides a list of toxic chemicals in products that could potentially affect consumers and the environment. As an organization, we evaluate the chemicals listed in this act on a yearly basis, to ensure we comply with the warning requirements.

Currently our products do not require the Prop 65 warning label, as the products we provide fall into the NSRLs (No Significant Risk Levels) category. If the warning requirements were to change in the future, causing required changes to our product labeling, we will take appropriate action.

Currently, our products are labeled with an Hg symbol, to reflect that the product contains mercury, as well as the WEEE Directive (Waste Electrical and Electronic Equipment Directive) symbol, identified with a crossed out wheelie bin, to represent that these products should not be disposed of in the normal waste stream. The products should be handled and disposed of according to applicable government regulations.

Please contact us if you have additional questions on this subject.

Bruce D. Kingsley
